A study was made of the presence of gonadotrophic
hormone in urinary extracts without finding appreciable
difference between excess of 96 U. i. and normal
women. The presence of proteins with gonadotrophic
activity in the central zone that corresponds to the a and
B globulins is shown by elution of the strip and later
biological assay. (Author)

DESCRIPTORS: *Chemical reactions, *Fluidized solids,
Phase transitions, Reagents, Fused materials.

This process is characterized in that the granulated
material is maintained in fluidized layers, hydrostatically
balanced in all points of the reagent, the accumu-
lation is provoked at the base of this layer of solid
masses, decanting as a consequence of the chemical re-
action, and these solid masses are separated and me-
chanically extracted through the surface of this layer.
